

The Shadows file

Version 3.6.2 for Windows® XP to Windows® 10

The *Shadows File* is a computer program, which serves as an electronic archive containing the music of the Shadows with regard to the individual titles and the record releases. For copyright reasons, an audio reproduction is **not** possible.

In summary, the following information is archived in the *Shadows File*:

A worldwide, illustrated discography of the Shadows records, which - as far as possible - covers all vinyl records and CDs ever released:

- shellac records, singles, EPs, 12" singles, LPs, CDs and maxi CDs
- from 48 countries from all continents
- about 50 shellacs, 1200 singles, 500 EPs, 15 12" singles, 1100 LPs and 600 CDs
- more than 16,000 pictures of record labels and sleeves, CDs and inlays
- for each item, information on musical tracks, catalog number, release date and, if applicable, specification of repressings and reissues

An A to Z list of all 681 studio recordings ever made by the Shadows under their name, including yet unreleased titles and live recordings published on official releases.

For each title, there is information about

- composers and contributing musicians
- recording location and date (as far as ascertainable) plus the playing length
- the date, medium and catalog number for the first mono, stereo and CD release
- further details such as e.g. the origin of cover versions or UK chart positions

The discography and the A to Z list are linked with each other, which means that the information of one part is easily accessible from the other part.

A biography of the Shadows, a timeline of the group's line-ups, a listing of released videos (VHS, DVD, BluRay) as well as pictures of pins, mugs, concert programs, songbook and sheet music round off the contents of the database.

Inquiries and orders via TheShadowsFile@t-online.de are welcome.
